

GATGARD™ DOOR WRAP™

SEAMLESS DOOR PROTECTION TECHNOLOGY

GAT Technologies is proud to introduce our new GATGARD™ Door Wrap™

The GATGARD™ Door Wrap™ is the solution to eliminate the high level of leading door edge damage. The rigid door protection wraps around the entire width of the door ensuring that there are no seams or joins at all in the Korogard door protection.

- One Piece Door Protection/No Joins
- Door Edge Completely protected
- No Maintenance
- Completely Seamless at Door Edge
- Eliminate Bacteria at Door edge

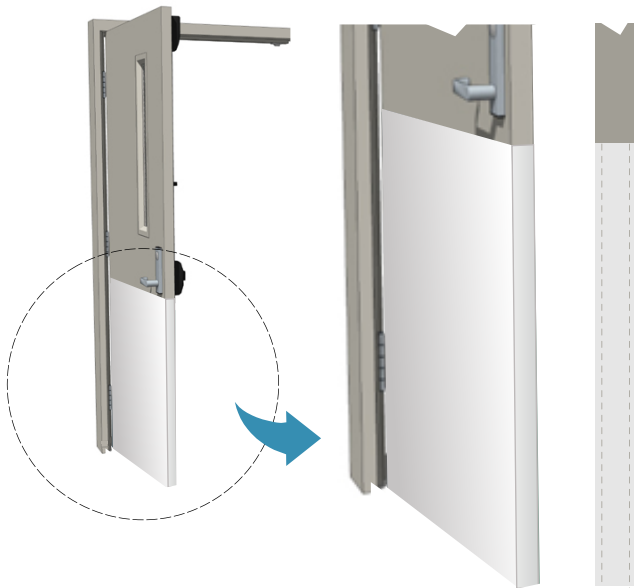

No Seam at door edge

No seam at the edge of the door eliminates any opportunity for bacteria collection, in contrast to the traditional edge protection method.

Sheet can be applied up to 1.5 metres wrapped completely around from front to back.

Sheet can protect one full face of the door, wrap around leading edge and a portion of rear door

Rebated Door allows for perfectly smooth transition from solid door to Korogard protection material.

Full front face and leading edge, partial rear coverage

Front 'B'

Back 'B'

Front 'A'

Back 'A'

Wrap up to 1.5 metres high edge to edge
